Free-breathing ultra-low flow imaging

Seeing the unseen – next generation

Ultra-low flow imaging

Say hello to a new generation of SMI that significantly expands the range of visible blood flow from extremely low to high flow with low noise and good sensitivity.

Ultra-high resolution

Aplio's new iBeam⁺ architecture enables advanced B-mode image quality with higher frame rate for better visualization of the underlying anatomy.

Free-breathing capability

With next generation SMI, users can experience fine flow even in difficult situations with less clutter and fewer motion artifacts.

SMI's level of vascular visualization, combined with high frame rates, advances diagnostic confidence when evaluating the micro-vasculature of organs and lesions.

The system's quad mode capability depicts up to four different modes including SMI or CEUS simultaneously in real-time for enhanced diagnostic insight.

Smart Sensor 3D allows you to acquire accurate 3D volumes in SMI mode with a standard linear or convex transducer.

Collaborate and communicate

Whether you work at a large university or local hospital, a private practice or in an imaging center – Aplio i-series / Prism Edition offers a variety of ways to connect to your network, to collaborate with experts, and to communicate directly with colleagues or Canon specialists.

Aplio connects seamlessly into hospital networks providing a full-spectrum solution that helps you manage patients and exams more efficiently while embracing standardized data formats.

For smaller hospitals or practices without an extensive hospital network, Aplio also offers the option of connecting to a local NAS in order to store all data securely.

With the embedded raw data functionality you can optimize, review, analyze and report your clinical data either on the device or on an optionally available workstation without losing functionality.

Advanced visualization

The Vitrea Advanced Visualization workstation gives you full access to your clinical data and diagnostic toolbox to manage routine and advanced clinical studies more efficiently.

Integrating modalities

On Aplio, merging modalities such as CT, MR or PET for synchronized display is a simple, automated process that allows you to easily identify and compare lesions and to safely navigate complex anatomy.

Interdisciplinary intervention

With dedicated imaging and navigation tools, Aplio can also be integrated with interventional solutions such as the Alphenix 4D CT to further improve confidence and accuracy in interventional procedures and their follow-up.

Wireless console

The optional wireless tablet allows you to remotely operate the system when it is difficult to scan a patient and reach the panel at the same time, without losing sight of the monitor.

Remote connection

Need expert advice? Or want to share some findings with peers? With Canon's optional ApliGate solution you can interact securely – right from your workplace.

Cloud services

The system's integrated Tricefy* option gives you direct access to cloud-based communication, image management and documentation, so you can instantly share images and reports with referring physicians or patients.

Connecting Aplio with Canon's InnerVision remote support is simple, safe and provides you with a wealth of benefits that you'll be able to enjoy directly at your system.

A perfect match from front to end

Meticulous design – all out of one hand

At Canon we develop, design and manufacture the core imaging components of our industry-leading ultrasound equipment in-house to ensure that soft- and hardware work perfectly in sync to provide superior clinical and economic value to our customers and their patients.

Single crystal

Aplio connects to a range of transducers that use single crystal technology to provide better visualization and improved penetration of up to 50 cm, so you can better manage your hard-to-image patients.

iDMS matrix technology

Aplio's intelligent Dynamic Micro-Slice (iDMS) matrix technology sharpens ultrasonic beams in the elevation direction to create a thin slice beam with continuous focus from the near to the far field.

Ultra-wideband transducers

Aplio's ultra-wideband, multi-frequency transducers provide superior sensitivity and resolution for both near and far field. The ability to use one transducer across a wider range of patient types can potentially reduce cost, while providing enhanced imaging.

A higher definition of imaging

iBeam+ is the next level of ultra-fast and precise beam shaping, enhancing image depth and detail with clear, sharp, and distinct images.

Aplio's iBeam+ beamformer technology enables up to 4 times faster* image processing in real time to provide sharper images with better penetration and thus optimal, more robust results for higher clinical confidence.

In combination with other imaging modes or advanced applications, iBeam+ can help you to improve clinical utility and operability with enhanced image uniformity, higher speed and fewer operation steps* to achieve an optimal result.

*compared to the previous versions of Aplio i-series

Improved uniformity

Aplio's innovative Full Focus function enables clear, uniform images from near and to far field without the need for focus adjustments. With fewer application steps and greater uniformity, this can be particularly useful for screening examinations.

Enhanced penetration

The improved bandwidth and processing power of the iBeam+ beamformer results in images with better penetration and detail resolution, so you can see more without having to switch to a lower frequency transducer.

Ultra Wide View

While typically the footprint of a transducer has limited the anatomy that we can show, Canon's Ultra Wide View allows you to extend the field of view by up to 100% while maintaining excellent image quality and frame rate throughout.

A comprehensive suite of tools that covers all aspects of women's health from assisted reproduction to full IOTA support makes Aplio a powerful solution for gynecological applications.

Aplio makes the echo easier with its excellent image sharpness and the automation of time-consuming measurements.

Outstanding image detail and definition with up to 33 MHz transducers and Shear Wave Elastography (SWE) for tendons make the system ideal for high-quality MSK and nerve imaging.

A complete multipurpose solution

Aplio i-series / Prism Edition is a truly multipurpose solution with consistently high-quality imaging, streamlined workflow and expert tools for a very wide variety of clinical specialties. Its modular concept and fully programmable user interface make it easy to customize features and functions to exactly meet your needs now and into the future.

As the recognized market leader in the high-end radiology segment, Aplio i-series is characterized by its excellent image quality, comprehensive diagnostic packages and a wide range of interventional tools.

Aplio delivers excellent imaging in obstetrics, especially in difficult-to-scan, high BMI patients. AI-based, automated algorithms support fast and reliable diagnostics.

While dedicated transducers ensure excellent imaging for vascular applications, automated scan protocols and measurements help you improve efficiency and consistency.
